Overview

- 1. Why we have collaborated
- 2. What we have collaborated on
- 3. Tips and tricks on academia and business collaborations

Why we have collaborated - University of Liverpool

History of research of the topic of AI and Law

Desire to use 'real life' data for testing research techniques

Impact development (important for the Research Excellence Framework)

Availability of subject matter experts

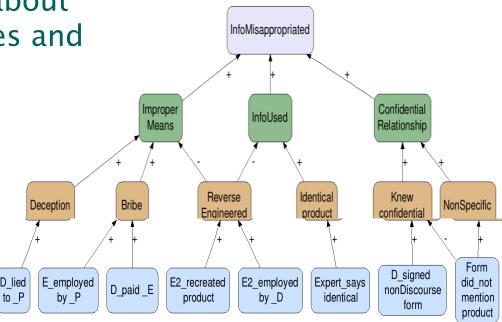

Why we have collaborated - University of Liverpool

 ADFs – abstract dialectical frameworks; theory to practice

Case based reasoning

 How to represent cases, reason about them in the context of other cases and explain decisions in

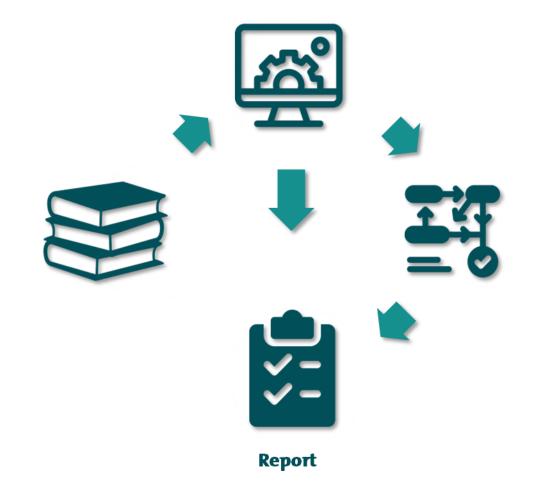

hard cases

Why we have collaborated – Weightmans What is the problem we are trying to solve?

What we have collaborated on Our approach – grounded in theory

Noise Induced Hearing Loss: An Application Of the Angelic Methodology

Latifa Al-Abdulkarim, Katie Atkinson, Trevor Bench-Capon, Department of Computer Science, The University of Liverpool, UK

Stuart Whittle, Rob Williams and Catriona Wolfenden Weightmans LLP, Liverpool, UK

Abstract. We describe the use of the ANGELIC methodology, developed to encapsulate knowledge of particular legal domains, to build a full scale practical application for internal use by a firm of legal practitioners. We describe the application, the sources used, the stages in development and the application. Some evaluation of the project and its potential for further development is given. The project represents an important step in demonstrating that academic research can prove useful to legal practitioners confronted by real legal tasks.

Noise Induced Hearing Loss: Building An Application Using the Angelic Methodology

Latifa Al-Abdulkarim, Katie Atkinson, Trevor Bench-Capon, Department of Computer Science, The University of Liverpool, UK

Stuart Whittle, Rob Williams and Catriona Wolfenden Weightmans LLP, Liverpool, UK

Abstract. The ANGELIC methodology was developed to encapsulate knowledge of particular legal domains. In this paper we describe its use to build a full scale practical application intended to be used internally by Weightmans, a large firm of legal practitioners with branches throughout the UK We describe the domain, Noise Induced Hearing Loss (NIHL), the sources used, the stages in development and the resulting application. Some evaluation of the project and its potential for further development is given. The project represents an important step in demonstrating that academic research can prove useful to legal practitioners confronted by real legal tasks.

What we have collaborated on Process and technology

What the collaboration has given us Gains and Outcomes

- Efficiency gains in processing work.
- Demonstrable, documented success of the application of AI research within our business.
- Clear audit trail.
- Ultimately, assisting with improving our service to our clients.

Collaboration tips and tricks

Some final thoughts on our collaboration journey

Business

- Clear articulation of the problem/task to be tackled.
- Getting in-house staff on board with the project.
- Dedicating time for the input to the technologies.

Academics

- Cutting through the hype.
- Making the research accessible.
- Developing mutual goals.

Collaboratively aligning our different motivations and drivers has led to the success of our project

2019 Modern Law Awards: Winners of Best Use of Technology

L-R Rob Williams (Weightmans), Dr Catriona Wolfenden (Weightmans), Prof Katie Atkinson (University of Liverpool), Stuart Whittle (Weightmans), Chloe Doyle (Kira Systems).

THANK YOU
